EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Griffith on 08/27/08.

2. The application has been amended as follows:

Claim 14. (Currently Amended) A message routing system, comprising:

a message routing network that enables routing of application-level messages between a plurality of services, said message routing network being built on an open platform overlaying a public network **and managing said plurality of services, each of said services being accessible by others of said plurality of services according to properties and permissions associated with each service in said plurality of services**, wherein said routing is based on a logical routing of **said a** message that is effected through a sequence of invocations among said plurality of services, said logical routing allowing said services to **be-invoked modify a route or a context for said message** without the message[[s]] being physically delivered to one or more of the services among the plurality of services, wherein a context of an invocation is defined at least in part by an invoking service, wherein upon return from a service invocation, said message routing network restores a message context to a context state of an invoking service of said service invocation, said logical routing determined by an evaluation of routing scripts defined by individual ones of said plurality of services such that each of said services is capable of including one or more others of said plurality of services in said logical routing without being included in a route for physical delivery of said message.

Claim 28. (Currently Amended) A message routing method for routing application-level messages between a plurality of services, comprising:

(a) providing a message routing network for exchanging application-level messages between a plurality of services, said message routing network being built on an open platform overlaying a public network and managing said plurality of services, each of said services being accessible by others of said plurality of services according to properties and permissions associated with each service in said plurality of services;

(b) evaluating routing scripts defined by individual ones of said plurality of services to determine a logical routing of an application-level message such that each of said services is capable of including one or more others of said plurality of services in said logical routing without being included in a route for physical delivery of said message;

(c) invoking a first service that receives only logical delivery of said message, said logical delivery allowing said first service to modify a route or a context for said message without said message being physically delivered to said first service, wherein said first service invocation has a first context defined at least in part by a first invoking service;

(d) invoking a second service, said second service invocation having a second context that is defined at least in part by said first service, wherein said second service invocation is managed by a message routing network on behalf of said first service, ~~said message routing network being built on an open platform overlaying a public network;~~ and

(e) delivering said message having said second context to said second service over said public network.

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to reasonably teach, singly or in combination, evaluating routing scripts defined by individual ones of said plurality of services to

determine a logical routing of an application-level message such that each of said services is capable of including one or more others of said plurality of services in said logical routing without being included in a route for physical delivery of said message.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
